

# Hardly been stolen – arrival in .... ?

There is no remedy to prevent it – but a smart cable will do!

This **PhoneGuard** smart cable, which is simply plugged into a GSM mobile phone, will automatically send an SMS to you as soon as your vehicle approaches the country border.

It may just as well be any other border or a group of “problematic” areas.

You can be kept informed by SMS if the vehicle is driven further into the area. It can be easily hid within the vehicle, and just before it is disconnected from the battery, it will warn you.

By means of web based location services (ask you local network operator) you can also see the vehicle’s position.

The **black box variant** (mobile phone already installed) offers even more safety.

For example: If the vehicle is in the border area of a “problematic” country, output one switches on a red lamp in the vehicle. This will warn the driver ‘You are approaching the border area of a “problematic” country. Please observe the entry restrictions.’

If the vehicle drives further into the “problematic” area, output two interferes with the motor management. A defect in the vehicle may be simulated for example which forces

the driver to stop. Thereafter, it will not be possible to continue the journey.

**Just a few Euros will help save expensive insurance rates!**
